Features

1

Strengthens
plant
immunity

2

Increases the
intake of
fertilizers by
plants

3

Increases
ripening speed
and yield

YANTA

Increases productivity by 25-150%

- 100% environmentally friendly

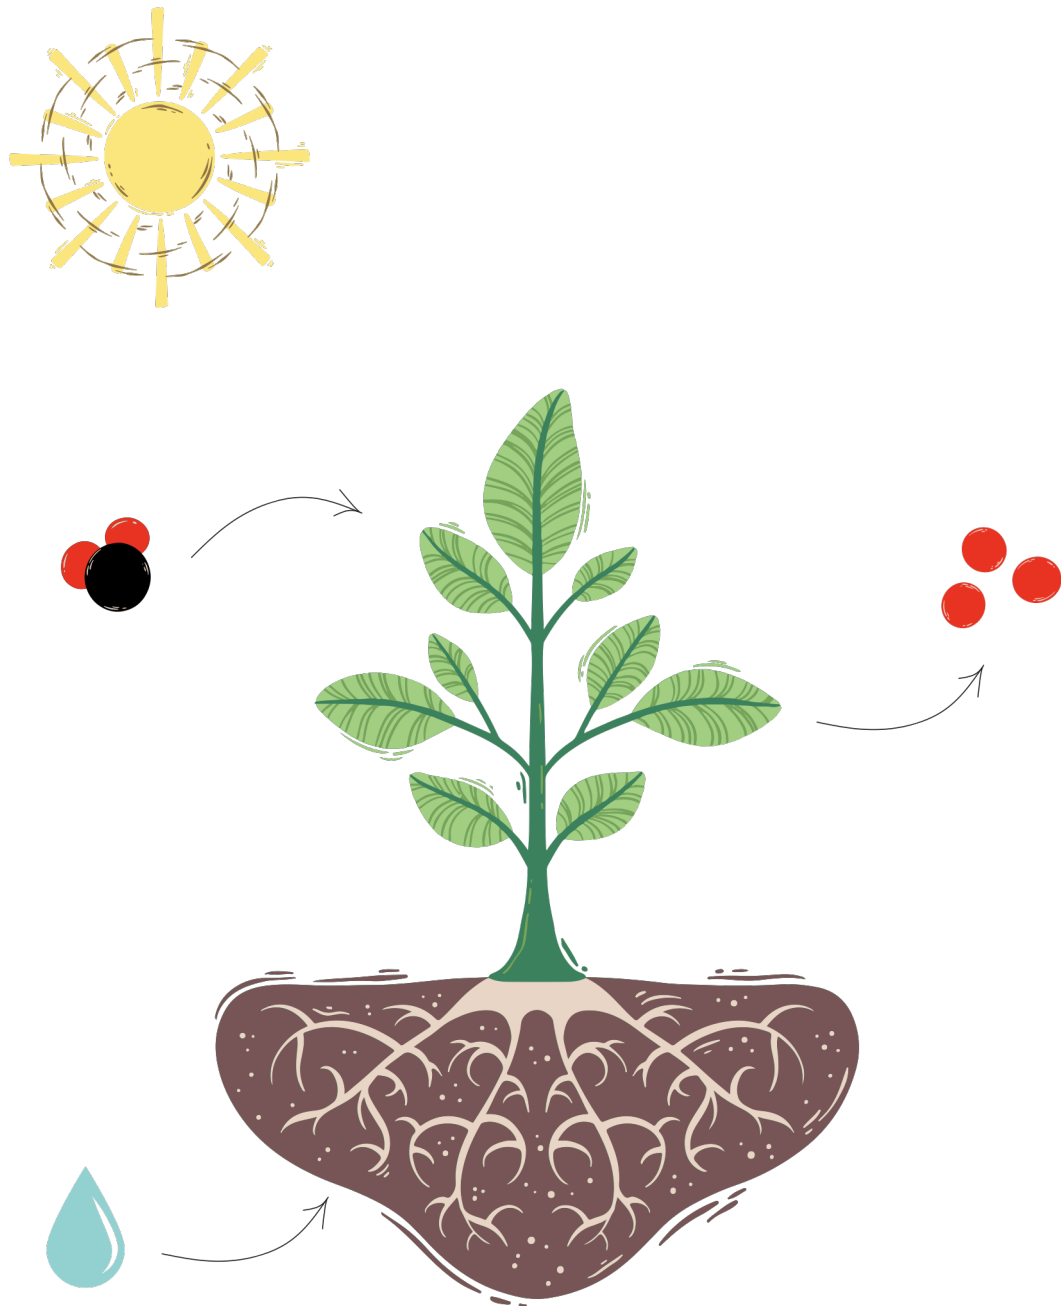

- High efficiency

- Easy to use

- Minimum consumption

History and research

- ✓ Provides your plants with the ability of coniferous plants not to shed their needles, to survive and to bear fruit in extremely severe Siberian conditions.
- ✓ Special substances in the bark and main structure of the source plants help provide resistance against external factors.
- ✓ Contains amino acids that support plant growth and development.

Advantages

It is fully compatible with conventional fertilizers

Microdoses are sufficient

It is NOT a fertilizer, supplement, food additive or a vitamin

Ease of treatment

Tests

agricultural tests

+%40 productivity +%17 oil contents

+78% growth in
plant size and number

- Flowers
- Houseplants
- Bean varieties
(soy etc.)

Yanta

- * Completely heals dying plants after treatment.
- ** Purifies plants from excessive doses of agricultural chemicals.

Landscape design

Yanta helps caring for grass and plants

Before

After

Our product, obtained from pine extracts, is not a "magic powder".

These pine extracts awaken the previously dormant natural abilities of plants.

After treatment, all abilities of the plants “wake up” and they begin to develop in full force.
